What could not be checked

Owner name: found for 1,615 of 3,319 businesses. The others are not registered under the same name they use on Google, so they are marked "not found".

Facebook and Instagram follower counts and public emails were not collected. Both sites block automated reading. The social link is shown when the business put it on its Google profile.

Google shows at most 120 results per search. Each area was searched with 35 terms in English and Spanish to get past that limit, but a business that never appears in those searches is not on the list.

Businesses with no street address on Google (they go to the customer) are placed in the area whose search found them.

Bad website list: a site is listed only when the problem was seen twice, the second time in a real phone browser. Sites that timed out or blocked the visit were left out, so the real number is higher.

Best 25 to call first
